DAV-101CIP

ABSTRACT OF THE DISCLOSURE

1	A plank panel for covering fronts of electronic equipment racks
2	consists of preferably three face plates separable via a break-
3	off groove such that the plank panel may be easily reduced to a
4	lesser height. The face plates provide slots for fasteners
5	that slide in from the side and are adjustable to slight
6	dimensional discrepancies and various configurations of the
7	mounting holes of various rack systems.
